

MARCH IS ENDOMETRIOSIS AWARENESS MONTH

Did you know...

ENDO CAN CAUSE:

Severe pain

(at any point in the menstrual cycle, often affecting the pelvic region but also known to affect other areas as well)

Gut issues

(constipation, diarrhea, pain...)

Infertility

(in 30-50% of people who have a uterus)

And much, much more...

Endo is far more common than is recognized. It is underdiagnosed, misunderstood, and sufferers are kept suffering from the myths and taboos surrounding it.
